

OFFICE OF THE DIRECTOR OF NATIONAL INTELLIGENCE

Forecasting Science & Technology (ForeST)

L E A D I N G I N T E L L I G E N C E I N T E G R A T I O N

Jason Matheny, IARPA

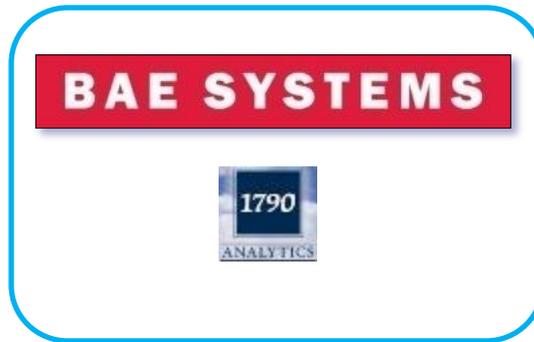

Program Goal

- Develop and test methods for generating accurate and timely forecasts for significant science and technology milestones, by efficiently aggregating the judgments of many experts
- Technical approach:
 - Generate good forecasting questions
 - From forecasters and topic leaders, through crowd-editing
 - From indicators in the scientific and patent literatures (FUSE)
 - Elicit and combine forecasts from thousands of scientists and engineers, globally, using a combinatorial prediction market -- SciCast.org

Research Teams

Evaluation Team

Evaluation

- Develop and test methods in parallel. As with all IARPA programs, the program is evaluated every six months.
- Run the world's largest S&T forecasting tournament.
- Evaluate using real events (1,000 per year). E.g., "Will \$100 whole human genome sequencing costs be achieved in 2015?"
- Evaluate against best known approaches: statistical models, deliberating experts, flat prediction markets, intelligence community forecasts.

SciCast

- SciCast is a prediction market focused on science and technology. It aggregates the knowledge and expertise of a diverse group of professionals & non-professionals from around the world and returns probable forecasts on future innovations.
- SciCast is different from other prediction markets because ***it can create and explore relationships between questions.***
