The Process Perspective

Discover	Design	Build	Test	Deploy	Optimize

Discover	Design	Build	Test	Deploy	Optimize
• Business case • Evaluate dependencies • Review existing architecture • Identify interfaces • Analyze alternatives • Benchmark performance	• Evaluate hosting models • Create design specs for prod and non-prod environments • Risk mitigation plan	• Stand up and configure infrastructure • Document architecture and SOPs • Install and configure applications, tools, etc.	• Beta test with super users • Grade app performance • DR test	• Cutover plan • Migrate trailing datasets • Rollback plan • Go/No Go • DNS remap • Transition to sustainment	• Test post-migration performance • Identify lessons learned and best practices • Conduct performance reviews

Design, Build, and Test for Security Along the Way!
